and excysted occysts of E. tenella grown in chickens.

cDNA was synthesized from poly mRNA using an oligo-dT
primer containing a Xhol site. Following second strand
synthesis, EcoRI adapters were ligated to the cDNA and
products were size-selected on Sephacryl S500. cDNAs were
digested with EcoRI/Xhol and cloned into lambda Zap II

encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Cells were provided by Drs. William J Pavan, Stacie Loftus, and Denise Larson (Division of Intramural Research Genetic Disease

Computer-based methods for the mouse full-length cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         plasmid ends
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       isolated from the indicated stickleback tissue, and a cDNA library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp linker primer containing an oligodT sequence preceded by a synthetic NotI site (first strand primer: 5'-GACTAGTTCTAGATCGCGAGGGGCCC(T)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NotI and ECORV sites of Express 1. Note that the ECORV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the ECORV site, and xxx is derived from the cDNA sequence). A map of the Express 1 vector is available at:

/knoi; Construction of the cDNA library was carried out xhoi; Construction of the cDNA library was carried out using Stratagenes 'UniZAP - CDNA synthesis kit'. CDNA was constructed using an oligo dT primer/linker that contains a Xhoi site within it. Following ds cDNA synthesis,
ECORI adapters were ligated to the blunt ends and sample was digested with Xhoi. The result is cDNA with an ECORI sticky end on one side and a Xhoi sticky end on the other. This cDNA was ligated directionally in UniZAP arms. The vector is designed containing the pBluescript sequence as well as lambda DNA and cDNA is cloned within this pBluescript sequence. The vector was then packaged using gold gigapackaging extracts. Library was grown in XLIBlue was excision using Stratagens 'Mass excision kit' that uses excision k
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        organism="Physcomitrella patens"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (bases 1 to 307)
                      second strand, to amplify the double stranded DNA, and to incorporate dUTP containing sequences into the ends of the double stranded cDNA. This DNA was size selected and cloned into pampl using the CloneAMP pampl System (Life Technologies, GibcoBRL) for cloning amplification products by a non-restriction site dependant process. The cloning was directional based on sequence asymmetry introduced at the ends during PCR amplification. The 3' CDNA ends are proximal to the NotI site of the multiple cloning site in pample. This annealing mixture was transformed into chemically competent DH10B, cells and selected for amplicallin resistant growth. The resulting clones (about 330,000) were pooled to make the library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        est@watson.wustl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note="Vector: panyl; construction of the cDNA library was performed by Dr. W. Gregg Clark using a modification of the cDNA synthesis protocol developed in the laboratory of Dr. Michael Lovett by Dr. Yulia Korshunova (personal communication). First polyA + RNA was isolated from total gametophore RNA using oligo dT magnetic beads. Following this, first strand cDNA synthesis was performed on the bead-bound polyA + RNA, during which an oligonucleotide anchor sequence was incorporated onto the 5'-ends of the CDNA. PCR amplification was then used to synthesize the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /db_xréf="taxon:3218"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Unizar arms. The vector is designed containing the pBluescript sequence as well as lambda DNA and cDNA is cloned within this pBluescript sequence. The vector was then packaged using Gold gigapackaging extracts. Library was grown in XLIBlue MRF, cells and amplified. The library was excised by mass excision using Stratagens 'Mass excision kit' that uses exassist as a helper phage that releases the pBluescript sequence and circularises it as single stranded plasmids that are then packaged (by helper phage) and secreted out of the host cell as phagemids. Solk cells were transformed with phagemids and the library was plated out on LB-amp plates to select for transformants. Approximately 1,000,000 colonies were grown and recovered by using Quiagen Midi prep kit. 2 micro grams of each library were used to transform DH10B cells by electroporation."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 172
                                                                                                                                                                                                                                                                                                                                                   Protoplasts were isolated from the protonemata, further incubated at 25C under continuous light for 2-3 days. The regenerated cells, which were rich in cells at a stage during the first asymmetric cell division, were collected. Total RNA was extracted for constructing a full-length cDNA library. The database of the EST clones is available at the PHYSCObase (http://moss.nibb.ac.jp).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        390 bp mRNA linear E

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protonemata were inoculated on BCDATG medium for every ca. 5 days. Protoplasts were isolated from the protonemata, further incubated at 35 under continuous light for 2-3 days. The regenerated cells, which were rich in cells at a stage during the first asymmetric cell division, were collected. Total RNA was extracted for constructing a full-length cDNA library. The database of the EST clones is available at the PHYSCObase (http://moss.nibb.ac.jp)

                                                                                                                                                                        /clone lib="MOSS EST library PPN"
//clone | Typector: pBluescript SK-; Site 1: EcoRI; Site 2:
XhoI; Construction of the cDNA library was carried out
using Stratagenes 'UniZAP - cDNA synthesis kit'. cDNA was
constructed using an oligo dT primer/linker that contains
a XhoI site within it. Following ScDNA synthesis,
EcoRI adapters were ligated to the blunt ends and sample
was digested with XhoI. The result is cDNA with an EcoRI
sticky end on one side and a XhoI sticky end on the other.
This cDNA was ligated directionally in UniZAP arms. The
vector is designed containing the pBluescript sequence as
well as lambda DNA and cDNA is cloned within this
pBluescript sequence. The vector was then packaged using
Gold gigapackaging extracts. Library was grown in XLIBlue
MRP' cells and amplified. The library was excised by mass
excision using Stratagens 'Mass excision kit' that uses
exassist as a helper phage that releases the pBluescript
sequence and circularises it as single stranded plasmids
that are then packaged (by helper phage) and secreted out
of the host cell as phagemids. SOLR cells were transformed
with phagemids and the library was plated out on LB-amp
plates to select for transformants. Approximately
                                stranded plasmid library was recovered by using Quiagen Midi prep kit. 2 micro grams of each library were used transform DH10B cells by electroporation."
                                                                                                                                        places to select for transformants. Approximately 1,000,000 colonies were grown and recovered. The double
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              organism="Physcomitrella patens"

Protonemata were inoculated on BCDATG medium for every ca. 5 days.
Protoplasts were isolated from the protonemata, further incubated at 25C under continuous light for 2-3 days. The regenerated cells, which were rich in cells at a stage during the first asymmetric cell division, were collected. Total RNA was extracted for constructing a full-length cDNA library. The database of the EST clones is available at the PMYSCObase (http://moss.nibb.ac.jp).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BJ959669 pphf full-length cDNA patens cDNA clone pphf3j20 3', BJ959669

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Email: tshini@genes.nig.ac.jp
Protonemata were inoculated on BCDATG medium for every ca. 5 days.
Protoplasts were isolated from the protonemata, further incubated at 25C under continuous light for 2-3 days. The regenerated cells, which were rich in cells at a stage during the first asymmetric cell division, were collected. Total RNA was extracted for constructing a full-length cDNA library. The database of the EST clones is available at the PHYSCObase (http://moss.nibb.ac.jp).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center For Genetic Resource Information National Institute of Genetics 1111 Yata, Mishima, Shizuoka 411-8540, Japan Tel: 81-559-81-6856

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note="Protonemata were inoculated on BCDATG medium for every ca. 5 days. Protoplasts were isolated from the protonemata, further incubated at 25C under continuous light for 2-3 days. The regenerated cells, which were rich in cells at a stage during the first asymmetric cell division, were collected. Total RNA was extracted for constructing a full-length cDNA library."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /clone lib="RPCI-23"
/note=Torgan: Kidney/Brain; Vector: pBACe3.6; Site 1:
/note=Torgan: Kidney/Brain; Vector: pBACe3.6; Site 1:
BCORI; Site 2: ECORI; Female C57BL/6U mouse kidney and/or
brain genomic DNA was isolated and partially digested
with a combination of EcoRI and EcoRI Methylase. Size
with a combination of EcoRI and EcoRI Methylase. Size
selected DNA was cloned into the pBACe3.6 vector at the
BCORI sites. The ligation products were transformed into
DH10B electrocompetent cells (BRL Life Technologies). "

/note="Forgan: Kidney/Brain; Vector: pBACe3.6; Site_and/or
Brain genomic DNA was isolated and partially digested
with a combination of EcoRI and EcoRI Methylase. Size
selected DNA was cloned into the pBACe3.6 vector at the
EcoRI sites. The ligation products were transformed into
DH10B electrocompetent cells (BRL Life Technologies). "
